Clinical Education

Philips Anatomical Intelligence for Breast Overview

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

Philips ultrasound general imaging 116VILT

About virtual instructor-led training

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

Philips Anatomical Intelligence for Breast Overview (GI16VILT)

Course description

This one-hour course is designed to provide customers an overview of the Philips Anatomical Intelligence for Breast tool, also known as AI Breast. This course will discuss the system and equipment requirements needed for AI Breast, the key features associated with AI Breast, a demonstration of the registration process and discussion on the benefits of the AI Breast tool.

Course objectives

Upon completion of this course, the learner should be able to:

- Review Breast Disease
- Describe the Anatomical Intelligence (AI) for Breast feature
- Identify the system and equipment requirements used with AI Breast
- Explain the key features related to AI Breast
- Demonstrate the AI Breast registration process
- Discuss the benefits of the AI Breast tool

Prerequisite

This course is intended for sonographers, mammographers and physicians who require additional knowledge about the Philips Anatomical Intelligence for Breast tool.

Audience statement

This course is intended for sonographers, mammographers and physicians who require additional knowledge about the Philips Anatomical Intelligence for Breast tool.
