

**PHILIPS**

Clinical Education

## US Imaging of the Abdomen and Retroperitoneum

Our goal at Philips Healthcare is to provide the clinical education you need to make the most of your equipment investment. Virtual instructor-led training (vILT) events use a robust online classroom platform that is specifically designed for highly-interactive, live online learning.

### **Philips ultrasound general imaging 117VILT**

#### **About virtual instructor-led training**

Virtual training is a facilitator-led, live online learning event that is delivered in a virtual environment. Participants can be geographically dispersed and also individually connected. Each learner uses their own computer or other compatible device. Virtual training is synchronous, meaning that participants are connected at the same time as the

facilitator. Philips virtual training events typically range from 60-120 minutes in length with a maximum of 40 participants. This socially engaging, purposefully-designed training allows participants the same quality education of an instructor-led classroom without the need or expense of traveling.

# US Imaging of the Abdomen and Retroperitoneum (GI117VILT)

## Course description

This one-hour course is designed to provide customers the basic knowledge to perform ultrasound of the abdomen and retroperitoneum exam. Program topics include the indications, technique, sonographic anatomy, required exam views and measurements of the abdominal and retroperitoneum ultrasound exam.

## Course objectives

Upon completion of this course, the learner should be able to:

- Discuss the appropriate transducer, tissue specific preset selection and patient positioning for abdominal imaging
- Recognize the most common indications for performing an abdomen/retroperitoneum exam
- Identify the minimum required anatomy to be included in this exam
- Identify the minimum required views associated with this exam
- Recognize the minimum required measurements associated in performing this exam

## Prerequisite

A thorough knowledge and understanding of 2D ultrasound imaging fundamentals is required for this program.

## Audience statement

This course is intended for physicians and sonographers interested in basic knowledge of the abdominal and retroperitoneum ultrasound exam.
